RESUPPLY OPERATION ACCIDENT

You are assigned to the deck department of the USS Iowa and your ship is conducting sea trials in the Atlantic Ocean.

During a resupply operation, the Chief is forcefully struck in the chest by a crane and is knocked back into a wall. As the first responder on the scene, you find the Chief laying on the deck with a puncture in his left shoulder and a four-inch laceration across his right elbow with heavy bleeding.

He is also complaining of having difficulties breathing and catching his breath.
