

RAPID VISUAL ACUITY TESTING

CONSIDER body substance isolation.

NOTE: If a Combat Lifesaver is available, direct them to assist.

01 Have the casualty cover the **UNAFFECTED** eye.

At an **ARM'S LENGTH**, assess the casualty's ability to:

(a) **READ** something with text on it (that you hold up).

NOTE: If the casualty is unable, follow the next step.

(b) **COUNT** fingers.

NOTE: If the casualty is unable, follow the next step.

(c) **IDENTIFY** hand motion.

NOTE: If the casualty is unable, follow the next step.

(d) **IDENTIFY** light versus dark by covering and uncovering the eye.

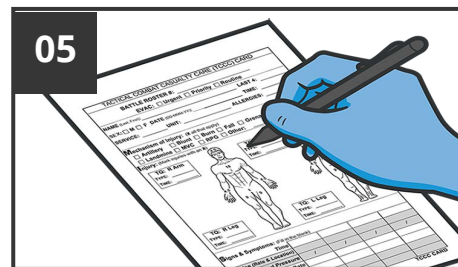

NOTE: Do not force open a swollen eye to conduct a field visual acuity test.

REPEAT the procedure for the other eye.

DETERMINE acuity assessment findings based on what the casualty can see (e.g., can read text or count fingers at 2 feet).

DOCUMENT all findings and treatments on a DD Form 1380 TCCC Casualty Card and attach it to the casualty.

NOTE: Include visual acuity for both eyes.
